## What is claimed is:

 A method for providing an anti-roll and an anti-yaw controls of a vehicle, comprising the steps of:

deciding whether an anti-roll control is required or not by comparing a roll rate of the vehicle with a predetermined threshold roll rate;

executing the anti-roll control if the roll rate is larger than the predetermined threshold roll rate;

deciding whether an anti-yaw control is required or not by comparing a difference between an actual yaw rate of the vehicle and a desired yaw rate with a predetermined threshold yaw rate; and

executing the anti-yaw control if the difference between the actual yaw rate and the desired yaw rate is larger than the predetermined threshold vaw rate.

- 2. The method of claim 1, wherein the anti-roll control is performed by hard-controlling simultaneously both right and left front wheel dampers and both right and left rear wheel dampers of the vehicle.
- 3. The method of claim 1, wherein the anti-yaw control is performed by hard-controlling both right and left front wheel dampers of the vehicle and by soft-controlling both right and left rear wheel dampers of the vehicle.
